LYDIA VÍLCHEZ LÓPEZ

(+34) 640 74 59 97 · Spain (remote) · lydiavilchezlopez@gmail.com · LinkedIn · GitHub · Portfolio

Detection engineer with one year in Prowler's Detection & Remediation team, writing and shipping detection logic for a production open-source security platform used by enterprise customers. Experienced in translating primary sources into precise, tested Python detections, mapping each one to the control it enforces, and reviewing community and AI-generated contributions for false positives and over-broad logic before release. Public contributions: open-source detection code and a technical blog post co-authored with an AWS engineer. Works remotely in English.

PROFESSIONAL EXPERIENCE

Detection & Remediation Engineer (Cloud Security) – Prowler *Sep 2025 – Sep 2026*

Remote

- Wrote and maintained detection logic in Python that flags insecure configurations across AWS (primary focus), GCP and Azure, shipped directly to enterprise customers.
- Read primary sources (CIS Benchmarks, CISA) and extracted the exact settings, data sources and fields each detection needed, mapping every check to the control it enforces.
- Core maintainer of the open-source project: reviewed detections from community contributors and AI-assisted tooling, catching wrong logic, false positives and over-broad conditions before release.
- Assigned severity to each finding and wrote its remediation guidance and public documentation, explaining what the detection covers and what it does not.
- Collaborated with product, engineering and external partners such as AWS in a fully remote, English-speaking team.

KEY PROJECTS

AWS Nitro Enclaves detection suite – Prowler *2026*

- Researched AWS Nitro Enclaves and built Prowler's first detection suite for them (11 checks), covering the secure configuration of confidential computing workloads used to protect AI/LLM data.
- Co-authored the technical blog post with an AWS engineer: *Your LLM runs in a Nitro Enclave. Who is checking the enclave?*

Google Workspace security auditing module – Bachelor's Thesis *Sep 2026*

- Built from scratch a Python module that detects misconfigurations across 11 Google Workspace services, with full coverage of the CIS Google Workspace Foundations Benchmark v1.3.0, CLI, API integration and public documentation.

TECHNICAL SKILLS

- **Detection & security:** detection logic design and review, false-positive analysis, security hardening (CIS Benchmarks, CISA), IAM policy analysis, Cloud Security Posture Management (CSPM).
- **Languages:** Python (primary), Bash, SQL; C, C++ and Java (basics).
- **Libraries & tools:** Git, GitHub, pytest, Pydantic, boto3, Azure SDK, Google APIs, REST APIs, Django, Docker (basic), Poetry, uv, pre-commit, Jira.
- **Cloud:** AWS (IAM, EC2, S3, VPC, KMS, CloudTrail, CloudWatch, Nitro Enclaves), GCP, Azure, Google Workspace.

EDUCATION

University of Granada *2020 – 2026*

Dual Bachelor's Degree in Computer Engineering and Business Administration and Management

Università degli Studi di Salerno *2022 – 2023*

Computer Engineering and Business Administration

LANGUAGES & CERTIFICATIONS

- **Languages:** Spanish (native), English (advanced, B2–C1; daily working language at Prowler), French (B2), Italian (intermediate).
- **Certifications:** Cambridge English: First (B2), DELF B2 (French), AWS Cloud Practitioner Essentials.
